Cerberus Networks

MyCloud Voice One
Simple, cost-effective SIP telephony for PSTN-replacement

With the accelerating switch-off of the national fixed-line telephony network, many users are looking for a simple, flexible and cost-effective replacement for fixed-line PSTN telephone services. That is why Cerberus has introduced MyCloud Voice One.

The features you need at an affordable price

MyCloud Voice One provides the features you need with cost effective rental and calling. We have also used a platform that is compatible with a very wide range of hardware and software including wired handsets, DECT wireless handsets, dedicated ATAs, router-integrated ATAs and software clients to ensure maximum compatibility with any hardware or software you already have.

Dedicated geographical number with prefix of your choice included	Supports number porting to keep your existing phone number, with optional DDI during porting
Voicemail, Call Barring and Caller ID	Missed call notification and voicemail delivered by email
Free calls to UK geographical and mobile networks*	Wide choice of hardware and software for easy, convenient access to the service

* See Rate Card for full details

Low-cost set-up and rental

MyCloud Voice One can be ordered on a 1-month or 12-month contract with simple monthly billing for rental and calls. 12-month contracts include free set-up.

Reduce call costs

MyCloud Voice One services come with a very cost-effective calling plan. All services include **UK geographical calls and UK mobile calls free of charge** (subject to AUP) and attractive rates on other destinations.

Wide range of supported hardware and software. Even bring your old phone!

MyCloud Voice One has been designed specifically to support a wide range of hardware and software to fit your requirements simply and cost effectively. This includes
- Handsets from Yealink, Fanvil, Cisco, Polycom and other
- Commercial and free options for desktop client software
- Commercial and free options for iOS and Android client software
- Dedicated ATAs from Cisco to connect your existing fixed-line phone to the service
- Built-in ATAs in Zyxel and Draytek routers to connect your existing fixed-line phone to the service

Keep your old phone number or get a new one

With MyCloud Voice One, you can choose between getting a new phone number with a prefix of your choice or porting your existing fixed-line PSTN phone number to us when you buy the service.

As Openreach roll-out more broadband services like FTTP and SOGEA that do not require a phone line, users wishing to keep their old phone number are faced with having to either have 2 lines coming into the premises (one for broadband and one for the phone) or else lose their phone number.

With MyCloud Voice One, we will port your existing number to the service as you transition from a traditional broadband service to the latest technology, meaning you get to keep your old number without paying for a second line.
